

ABSTRACT

The AskSDCKL Chatbot is developed to assist students, lecturers, staff, parents, and visitors in easily obtaining college-related information through an interactive chat system. Traditional methods such as asking in person or searching websites can be time-consuming. This project uses artificial intelligence and Firebase to store and retrieve data, allowing users to ask questions and instantly receive accurate responses. The chatbot enhances accessibility, reduces staff workload, and provides 24/7 support for college-related queries.

OBJECTIVE

- To implement a centralized chatbot system capable of instantly answering frequently asked questions from students and staff, minimizing repetitive queries and improving response efficiency.
- To improve user experience in accessing academic and campus information through a simple and interactive chat interface.

METHODOLOGY

CONCLUSION

The AskSDCKL Chatbot successfully demonstrates how artificial intelligence and cloud databases can improve communication between students and the college administration. It saves time, enhances accessibility, and supports digital transformation in education. Future enhancements include adding voice recognition, multilingual support, and a mobile app version and more.
